9 OCTOBER 2012

Subject:
**DAL.BIZ – ONLINE SERVICES
EMISSION CALCULATOR**

Dear valued Customers,

It is an objective of our company to protect the marine and global environment. In following this objective we comply with all environmental legislation and regulations. Consequently, in managing our business, environmental issues have a high priority and although ocean transport is recognized to be the most environmentally friendly mode of transport, we continually strive to achieve improvements in the reduction of emissions like CO².

To assist you to evaluate the emissions related to the transports that we carry out on your behalf we have developed an online-emissions-calculation-tool.

This tool will be released on 10 October 2012 and can be found on www.DAL.biz / Online Services via the following link <https://my.dal.biz>.

To access the tool you will require a password which is obtainable from your local DAL Agency office who will also be pleased to assist you with any questions you may have.

The tool will provide initially data on the port to port CO² emissions of 20' or 40' container transports under a DAL Bill of Lading. In 2013 we plan to upgrade the calculation tool to cover all environment relevant emissions e. g. NO^x and SO². The calculation method on which the tool has been developed has been verified by the Lloyds Register.

Yours sincerely,
DAL Deutsche Afrika-Linien GmbH & Co. KG
